# Chapter 1

## Namespace Index

### 1.1 Packages

Here are the packages with brief descriptions (if available):

<a href="#">AlgoParam</a>	Provides tunable parameter classes for use in the Computer-Aided Discovery pipeline . . . . .	7
<a href="#">data_util</a>	Provides utilities for handling data . . . . .	7
<a href="#">DataClass</a>	Provides base data classes inherited by the specific data fetchers . . . . .	7
<a href="#">GRACE</a>	Provides classes for accessing <a href="#">GRACE</a> data . . . . .	7
<a href="#">Groundwater</a>	Provides classes for accessing <a href="#">Groundwater</a> data . . . . .	7
<a href="#">Kepler</a>	Provides classes for accessing <a href="#">Kepler</a> data . . . . .	7
<a href="#">map_util</a>	A collection of map manipulation tools . . . . .	8
<a href="#">PBO</a>	Provides classes for accessing <a href="#">PBO</a> data . . . . .	8
<a href="#">pbo_util</a>	Tools for working with <a href="#">PBO</a> GPS data, including reference frame stabilization code . . . . .	8
<a href="#">trend_util</a>	This module is designed to provide a suite of tools for quick analysis of the linear and sinusoidal (annual, semi-annual, seasonal, and monthly) trends of time-series data (formatted using the pandas format) . . . . .	8

## Chapter 2

# Hierarchical Index

### 2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

framework.param_class.AutoParam . . . . .	14
framework.param_class.AutoParamList . . . . .	15
framework.param_class.AutoParamListCycle . . . . .	16
framework.param_class.AutoParamMinMax . . . . .	17
framework.data_class.DataFetcherBase . . . . .	25
object	
framework.data_class.DataWrapperBase . . . . .	30
framework.param_class.AutoList . . . . .	9
framework.param_class.AutoListCycle . . . . .	11
framework.param_class.AutoListPermute . . . . .	12
framework.param_class.AutoListRemove . . . . .	12
framework.param_class.AutoListSubset . . . . .	13
utilities.map_util.Planet . . . . .	31
DataFetcherBase	
astro.kepler.DataFetcher . . . . .	19
geo.grace.DataFetcher . . . . .	24
geo.groundwater.DataFetcher . . . . .	18
geo.pbo.DataFetcher . . . . .	21
DataWrapperBase	
astro.kepler.DataWrapper . . . . .	29
geo.grace.DataWrapper . . . . .	27
geo.groundwater.DataWrapper . . . . .	26
geo.pbo.DataWrapper . . . . .	28

## Chapter 3

# Class Index

### 3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">framework.param_class.AutoList</a>	
List for returning selections of lists, as opposed to a single element . . . . .	9
<a href="#">framework.param_class.AutoListCycle</a>	
Cycles through a list of list selections . . . . .	11
<a href="#">framework.param_class.AutoListPermute</a>	
A perturber that permutes a list . . . . .	12
<a href="#">framework.param_class.AutoListRemove</a>	
Removes a different single element from the initial list at each perturb call . . . . .	12
<a href="#">framework.param_class.AutoListSubset</a>	
A list perturber that creates random subsets of a list . . . . .	13
<a href="#">framework.param_class.AutoParam</a>	
Defines a tunable parameter class inherited by specific subclasses . . . . .	14
<a href="#">framework.param_class.AutoParamList</a>	
Tunable parameter with a specified list of choices that can be randomly selected via perturb . . . . .	15
<a href="#">framework.param_class.AutoParamListCycle</a>	
Cycles through a list of paramters . . . . .	16
<a href="#">framework.param_class.AutoParamMinMax</a>	
<a href="#">geo.groundwater.DataFetcher</a>	
Generates Data Wrappers of groundwater measurements taken in California . . . . .	18
<a href="#">astro.kepler.DataFetcher</a>	
Data Fetcher for <a href="#">Kepler</a> light curve data . . . . .	19
<a href="#">geo.pbo.DataFetcher</a>	
Data_type = "pbo" or "snow" for now the parameters list must include: 1) region of interest window (for generating stations list) 2) stabilization area (for running stabilization) . . . . .	21
<a href="#">geo.grace.DataFetcher</a>	
Data Fetcher for <a href="#">GRACE</a> data . . . . .	24
<a href="#">framework.data_class.DataFetcherBase</a>	
Base class for all data fetchers . . . . .	25
<a href="#">geo.groundwater.DataWrapper</a>	
Wraps GroundWater Data . . . . .	26
<a href="#">geo.grace.DataWrapper</a>	
Class used to wrap Grace data . . . . .	27

<a href="#">geo.pbo.DataWrapper</a>	
Class used to wrap <a href="#">PBO</a> Data . . . . .	28
<a href="#">astro.kepler.DataWrapper</a>	
Data wrapper for kepler light curve data . . . . .	29
<a href="#">framework.data_class.DataWrapperBase</a>	
Base class for wrapping data for use in DiscoveryPipeline . . . . .	30
<a href="#">utilities.map_util.Planet</a>	
A class for storing variables about a planetary body . . . . .	31

## Chapter 4

# Namespace Documentation

### 4.1 AlgoParam Namespace Reference

Provides tunable parameter classes for use in the Computer-Aided Discovery pipeline.

### 4.2 data\_util Namespace Reference

Provides utilities for handling data.

### 4.3 DataClass Namespace Reference

Provides base data classes inherited by the specific data fetchers.

### 4.4 GRACE Namespace Reference

Provides classes for accessing [GRACE](#) data.

### 4.5 Groundwater Namespace Reference

Provides classes for accessing [Groundwater](#) data.

### 4.6 Kepler Namespace Reference

Provides classes for accessing [Kepler](#) data.

## 4.7 map\_util Namespace Reference

A collection of map manipulation tools.

## 4.8 PBO Namespace Reference

Provides classes for accessing [PBO](#) data.

## 4.9 pbo\_util Namespace Reference

Tools for working with [PBO](#) GPS data, including reference frame stabilization code.

## 4.10 trend\_util Namespace Reference

This module is designed to provide a suite of tools for quick analysis of the linear and sinusoidal (annual, semi-annual, seasonal, and monthly) trends of time-series data (formatted using the pandas format).

## Chapter 5

# Class Documentation

### 5.1 framework.param\_class.AutoList Class Reference

specifies a list for returning selections of lists, as opposed to a single element

Inheritance diagram for framework.param\_class.AutoList:

#### Public Member Functions

- def `__init__` (self, val\_list)  
*Construct a `AutoList` object.*
- def `val` (self)  
*Retrieves current list of parameters.*
- def `perturb` (self)  
*This class doesn't change list when being perturbed.*
- def `reset` (self)  
*Reset current list to initial list.*
- def `getAllOptions` (self)
- def `__str__` (self)  
*String representation of class.*
- def `__len__` (self)  
*Retrieves the length of parameters contained in the list.*
- def `__getitem__` (self, ii)  
*Retrieves item from list.*
- def `__setitem__` (self, ii, val)  
*Set a value in the list.*
- def `__call__` (self)  
*Retrieve current list.*

## Public Attributes

- **val\_init**
- **val\_list**

### 5.1.1 Constructor & Destructor Documentation

5.1.1.1 `def framework.param_class.AutoList.__init__( self, val_list )`

#### Parameters

<i>val_list</i>	List of parameters
-----------------	--------------------

### 5.1.2 Member Function Documentation

5.1.2.1 `def framework.param_class.AutoList.__call__( self )`

#### Returns

Current list

5.1.2.2 `def framework.param_class.AutoList.__getitem__( self, ii )`

#### Parameters

<i>ii</i>	Index of item to be retrieved
-----------	-------------------------------

#### Returns

Item at index ii

5.1.2.3 `def framework.param_class.AutoList.__len__( self )`

#### Returns

Number of elements in the list

5.1.2.4 `def framework.param_class.AutoList.__setitem__( self, ii, val )`

#### Parameters

<i>ii</i>	Index of list to be set
<i>val</i>	Input value

5.1.2.5 `def framework.param_class.AutoList.__str__( self )`

Returns

String containing all parameters in list

5.1.2.6 `def framework.param_class.AutoList.perturb( self )`

5.1.2.7 `def framework.param_class.AutoList.val( self )`

Returns

List of current parameters

The documentation for this class was generated from the following file:

- framework/param\_class.py

## 5.2 framework.param\_class.AutoListCycle Class Reference

Cycles through a list of list selections.

Inheritance diagram for framework.param\_class.AutoListCycle:

### Public Member Functions

- `def __init__(self, list_val_list)`  
*Construct a AutoList\_Cycle object.*
- `def perturb(self)`  
*Select next list from list of lists.*
- `def reset(self)`  
*Resets to the first list in the list of lists.*
- `def getAllOptions(self)`

### Public Attributes

- `list_val_list`
- `val_list`
- `index`

### 5.2.1 Constructor & Destructor Documentation

5.2.1.1 `def framework.param_class.AutoListCycle.__init__( self, list_val_list )`

#### Parameters

<code>list_val_list</code>	List of different lists to cycle through
----------------------------	--

The documentation for this class was generated from the following file:

- `framework/param_class.py`

### 5.3 `framework.param_class.AutoListPermute` Class Reference

A perturber that permutes a list.

Inheritance diagram for `framework.param_class.AutoListPermute`:

#### Public Member Functions

- `def perturb (self)`  
*Randomly permutes the initial list.*

#### Additional Inherited Members

The documentation for this class was generated from the following file:

- `framework/param_class.py`

### 5.4 `framework.param_class.AutoListRemove` Class Reference

Removes a different single element from the initial list at each perturb call.

Inheritance diagram for `framework.param_class.AutoListRemove`:

## Public Member Functions

- def `__init__` (self, val\_list)  
*Construct a AutoList\_Cycle object.*
- def `perturb` (self)  
*Systematically change which item is absent from the list.*
- def `reset` (self)  
*Reset the list to its initial value.*

## Public Attributes

- `n`
- `val_list`

### 5.4.1 Constructor & Destructor Documentation

5.4.1.1 def framework.param\_class.AutoListRemove.\_\_init\_\_ ( self, val\_list )

#### Parameters

<code>val_list</code>	Initial list of parameters.
-----------------------	-----------------------------

The documentation for this class was generated from the following file:

- framework/param\_class.py

## 5.5 framework.param\_class.AutoListSubset Class Reference

A list perturber that creates random subsets of a list.

Inheritance diagram for framework.param\_class.AutoListSubset:

## Public Member Functions

- def `perturb` (self)  
*Perturb the list by selecting a random subset of the initial list.*

## Public Attributes

- **val\_list**

### 5.5.1 Detailed Description

List can be empty.

The documentation for this class was generated from the following file:

- framework/param\_class.py

## 5.6 framework.param\_class.AutoParam Class Reference

Defines a tunable parameter class inherited by specific subclasses.

Inheritance diagram for framework.param\_class.AutoParam:

## Public Member Functions

- def `__init__` (self, val\_init)  
*Initialize an [AutoParam](#) object.*
- def `perturb` (self)  
*Perturb paramter.*
- def `reset` (self)  
*Reset value to initial value.*
- def `__str__` (self)  
*String representation of class.*
- def `__call__` (self)  
*Retrieves current value of the parameter.*

## Public Attributes

- **val**
- **val\_init**

### 5.6.1 Detailed Description

[AutoParam](#) class and subclass work on a single value. functions perturb value and reset to initial value

### 5.6.2 Constructor & Destructor Documentation

5.6.2.1 def framework.param\_class.AutoParam.\_\_init\_\_ ( self, val\_init )

## Parameters

<code>val_init</code>	Value for parameter
-----------------------	---------------------

## 5.6.3 Member Function Documentation

5.6.3.1 `def framework.param_class.AutoParam.__call__( self )`

## Returns

Current value of the parameter

5.6.3.2 `def framework.param_class.AutoParam.__str__( self )`

## Returns

String of current value

5.6.3.3 `def framework.param_class.AutoParam.perturb( self )`

This class doesn't change the value.

The documentation for this class was generated from the following file:

- framework/param\_class.py

## 5.7 framework.param\_class.AutoParamList Class Reference

a tunable parameter with a specified list of choices that can be randomly selected via perturb

Inheritance diagram for framework.param\_class.AutoParamList:

## Public Member Functions

- `def __init__(self, val_init, val_list)`  
Construct an [AutoParamList](#) object.
- `def perturb(self)`  
Randomly select a value from `val_list`.
- `def reset(self)`  
Reset the list to the default value.

## Public Attributes

- **val**
- **val\_init**
- **val\_list**

### 5.7.1 Constructor & Destructor Documentation

5.7.1.1 `def framework.param_class.AutoParamList.__init__( self, val_init, val_list )`

#### Parameters

<i>val_init</i>	initial value for the parameter
<i>val_list</i>	List of possible variants for the parameter

The documentation for this class was generated from the following file:

- framework/param\_class.py

## 5.8 framework.param\_class.AutoParamListCycle Class Reference

Cycles through a list of paramters.

Inheritance diagram for framework.param\_class.AutoParamListCycle:

## Public Member Functions

- `def __init__(self, val_list)`  
Construct an [AutoParamListCycle](#).
- `def perturb(self)`  
Select the next value from the list of parameters.
- `def reset(self)`  
Reset the list to the default values.

## Public Attributes

- **val**
- **val\_list**
- **current\_index**

### 5.8.1 Constructor & Destructor Documentation

5.8.1.1 `def framework.param_class.AutoParamListCycle.__init__( self, val_list )`

#### Parameters

<code>val_list</code>	List of possible variants for the parameter
-----------------------	---

The documentation for this class was generated from the following file:

- framework/param\_class.py

## 5.9 framework.param\_class.AutoParamMinMax Class Reference

Inheritance diagram for framework.param\_class.AutoParamMinMax:

### Public Member Functions

- `def __init__(self, val_init, val_min, val_max, decimals=0, extreme=0)`  
Construct [AutoParamMinMax](#) object.
- `def perturb(self)`  
Perturb the paramter by choosing a random value between `val_min` and `val_max`.
- `def reset(self)`

### Public Attributes

- `val`
- `val_init`
- `val_min`
- `val_max`
- `n`
- `n_max`
- `decimals`

### 5.9.1 Constructor & Destructor Documentation

5.9.1.1 `def framework.param_class.AutoParamMinMax.__init__( self, val_init, val_min, val_max, decimals = 0, extreme = 0 )`

## Parameters

<i>val_init</i>	Initial value for parameter
<i>val_min</i>	Minimum value for param
<i>val_max</i>	Maximum value for parameter
<i>decimals</i>	Number of decimals to include in the random number
<i>extreme</i>	Either the maximum or minimum is chosen every extreme number of iterations. Using a value of one will be an extreme value every time. Using a value of zero will always choose a random value.

## 5.9.2 Member Function Documentation

5.9.2.1 `def framework.param_class.AutoParamMinMax.perturb ( self )`

Will choose a random number with precision specified by decimals. Will optionally pick the min or the max value after a specified number of perturb calls

The documentation for this class was generated from the following file:

- framework/param\_class.py

5.10 `geo.groundwater.DataFetcher` Class Reference

Generates Data Wrappers of groundwater measurements taken in California.

Inheritance diagram for `geo.groundwater.DataFetcher`:

## Public Member Functions

- `def __init__ (self, ap_paramList=[], start_date=None, end_date=None, cutoff=0.75, adjust_heights=False)`  
*Construct a Ground Water Data Fetcher.*
- `def output (self)`  
*Generate [Groundwater](#) Data Wrapper.*
- `def __str__ (self)`  
*String representation of data fetcher.*
- `def getStationMetadata ()`

## Public Attributes

- `meta_data`
- `start_date`
- `end_date`
- `ap_paramList`
- `cutoff`
- `adjust_heights`

## 5.10.1 Constructor &amp; Destructor Documentation

5.10.1.1 `def geo.groundwater.DataFetcher.__init__( self, ap_paramList = [], start_date = None, end_date = None, cutoff = 0.75, adjust_heights = False )`

## Parameters

<code>ap_paramList[station_list]</code>	List of stations (Optional)
<code>start_date</code>	Starting date (default: None)
<code>end_date</code>	Ending date (default: None)

## 5.10.2 Member Function Documentation

5.10.2.1 `def geo.groundwater.DataFetcher.__str__( self )`

## Returns

string describing data fetcher

5.10.2.2 `def geo.groundwater.DataFetcher.output( self )`

## Returns

[Groundwater](#) Data Wrapper

The documentation for this class was generated from the following file:

- `geo/groundwater/data_fetcher.py`

## 5.11 astro.kepler.DataFetcher Class Reference

Data Fetcher for [Kepler](#) light curve data.

Inheritance diagram for `astro.kepler.DataFetcher`:

## Public Member Functions

- `def __init__(self, ap_paramList, normalize=False, drop_on_quality=False, filter_window=None, quarter_list=None)`  
*Initialize [Kepler](#) Data Fetcher.*
- `def output(self)`  
*Output kepler data wrapper.*

## Public Attributes

- `normalize`
- `drop_on_quality`
- `filter_window`
- `quarter_list`

### 5.11.1 Constructor & Destructor Documentation

5.11.1.1 `def astro.kepler.DataFetcher.__init__( self, ap_paramList, normalize = False, drop_on_quality = False, filter_window = None, quarter_list = None )`

#### Parameters

<code>ap_paramList[kepler_id_list]</code>	List of kepler id's
<code>normalize</code>	Normalize the PDCSAP_FLUX
<code>drop_on_quality</code>	Drop data if SAP_QUALITY != 0
<code>filter_window</code>	Size of window used when removing systematic offsets.
<code>quarter_list</code>	List of quarters (0-17)

### 5.11.2 Member Function Documentation

5.11.2.1 `def astro.kepler.DataFetcher.output( self )`

#### Returns

DataWrapper

The documentation for this class was generated from the following file:

- `astro/kepler/data_fetcher.py`

## 5.12 geo.pbo.DataFetcher Class Reference

data\_type = "pbo" or "snow" for now the parameters list must include: 1) region of interest window (for generating stations list) 2) stabilization area (for running stabilization)

Inheritance diagram for geo.pbo.DataFetcher:

### Public Member Functions

- def `__init__` (self, start\_time, end\_time, lat\_range, lon\_range, ap\_paramList, mdyratio=.5, epFlag=0, stabFlag=1)  
*Initialize a [DataFetcher](#).*
- def `setStationList` (self, station\_list)
- def `stationCheck` (self)  
*Generates a list of stations within site radius.*
- def `stabilize` (self)  
*Select data from sites within site radius for later use in stabilization.*
- def `rawData` (self)  
*Select data from sites within site radius to be returned without stabilization.*
- def `getInfo` (self)
- def `output` (self)  
*Generate [PBO](#) Data Wrapper.*
- def `__str__` (self)  
*print the parameter values*
- def `getStationMetadata` ()  
*Read in the metadata and convert to dictionary.*
- def `getMetadata` (self)

### Public Attributes

- `start_time`
- `end_time`
- `ap_paramList`
- `geospace`
- `station_list`
- `mdyratio`
- `epFlag`
- `stabFlag`
- `meta_data`
- `smSet_all`
- `smHdr_all`

## 5.12.1 Constructor & Destructor Documentation

5.12.1.1 `def geo.pbo.DataFetcher.__init__( self, start_time, end_time, lat_range, lon_range, ap_paramList, mdyratio = .5, epFlag = 0, stabFlag = 1 )`

## Parameters

<i>start_time</i>	String of starting date in the form of "2005-01-01"
<i>end_time</i>	String of ending date in the form of "2014-12-31"
<i>lat_range</i>	Latitude range used to select stabilization sites
<i>lon_range</i>	Longitude range used to select stabilization sites ap_paramList[radius]: Site radius to search around (km)
<i>ap_paramList[geo_point]</i>	Tuple containing lat and lon coordinates

## 5.12.2 Member Function Documentation

5.12.2.1 `def geo.pbo.DataFetcher.__str__( self )`

## Returns

String representation of Data Fetcher

5.12.2.2 `def geo.pbo.DataFetcher.getStationMetadata ( )`

## Returns

dictionary of [PBO](#) metadata

5.12.2.3 `def geo.pbo.DataFetcher.output ( self )`

## Returns

[PBO](#) Data Wrapper

5.12.2.4 `def geo.pbo.DataFetcher.stationCheck ( self )`

## Returns

List of stations within site radius

The documentation for this class was generated from the following file:

- `geo/pbo/data_fetcher.py`

## 5.13 geo.grace.DataFetcher Class Reference

Data Fetcher for [GRACE](#) data.

Inheritance diagram for geo.grace.DataFetcher:

### Public Member Functions

- `def __init__(self, ap_paramList, start_date=None, end_date=None, resample=True)`  
*Construct a Grace Data Fetcher.*
- `def output(self)`  
*Create data wrapper of grace data for specified geopoint.*
- `def __str__(self)`  
*String representation of data fetcher.*

### Public Attributes

- `start_date`
- `end_date`
- `resample`

### 5.13.1 Constructor & Destructor Documentation

5.13.1.1 `def geo.grace.DataFetcher.__init__( self, ap_paramList, start_date = None, end_date = None, resample = True )`

#### Parameters

<code>ap_paramList[geo_pont]</code>	Geographic location of grace data to select
<code>start_date</code>	Beginning date
<code>end_date</code>	Ending date
<code>resample</code>	Resample the data to daily resolution, leaving NaN's in days without data (Default True)

### 5.13.2 Member Function Documentation

5.13.2.1 `def geo.grace.DataFetcher.__str__( self )`

## Returns

String listing the name and geopoint of data fetcher

5.13.2.2 `def geo.grace.DataFetcher.output ( self )`

## Returns

Grace Data Wrapper

The documentation for this class was generated from the following file:

- `geo/grace/data_fetcher.py`

## 5.14 framework.data\_class.DataFetcherBase Class Reference

Base class for all data fetchers.

### Public Member Functions

- `def __init__ (self, ap_paramList=[])`  
*Initialize data fetcher with parameter list.*
- `def output (self)`  
*Output data wrapper.*
- `def perturb (self)`  
*choose other random value for all parameters*
- `def reset (self)`  
*set all parameters to initial value*
- `def __str__ (self)`  
*Generate string description.*
- `def getMetadata (self)`  
*Return metadata about Data Fetcher.*

### Public Attributes

- `ap_paramList`

### 5.14.1 Constructor & Destructor Documentation

5.14.1.1 `def framework.data_class.DataFetcherBase.__init__ ( self, ap_paramList = [ ] )`

## Parameters

<code>ap_paramList</code>	List of parameters
---------------------------	--------------------

### 5.14.2 Member Function Documentation

5.14.2.1 `def framework.data_class.DataFetcherBase.getMetadata ( self )`

## Returns

metadata of object.

The documentation for this class was generated from the following file:

- `framework/data_class.py`

## 5.15 geo.groundwater.DataWrapper Class Reference

Wraps GroundWater Data.

Inheritance diagram for `geo.groundwater.DataWrapper`:

### Public Member Functions

- `def __init__ (self, obj_wrap, meta_data)`  
*Creates Ground Water Data Wrapper.*
- `def info (self)`  
*Get the ground water metadata.*
- `def getIndices (self)`  
*Get the indices of the data.*
- `def getIterator (self)`  
*Get an iterator to access the ground water data.*

### Public Attributes

- `meta_data`

### 5.15.1 Constructor & Destructor Documentation

5.15.1.1 `def geo.groundwater.DataWrapper.__init__ ( self, obj_wrap, meta_data )`

## Parameters

<i>obj_wrap</i>	Groundwater data to wrap
<i>meta_data</i>	Groundwater meta data

## 5.15.2 Member Function Documentation

5.15.2.1 `def geo.groundwater.DataWrapper.getIndices ( self )`

## Returns

(station\_list, 'Water Depth')

5.15.2.2 `def geo.groundwater.DataWrapper.getIterator ( self )`

## Returns

Iterator to the data (label, data, error)

5.15.2.3 `def geo.groundwater.DataWrapper.info ( self )`

## Returns

meta\_data

The documentation for this class was generated from the following file:

- geo/groundwater/data\_wrapper.py

## 5.16 geo.grace.DataWrapper Class Reference

Class used to wrap Grace data.

Inheritance diagram for geo.grace.DataWrapper:

## Public Member Functions

- def `getIterator` (self)  
*Retrieve an iterator to the data.*

### 5.16.1 Member Function Documentation

#### 5.16.1.1 `def geo.grace.DataWrapper.getIterator ( self )`

##### Returns

Iterator to the `GRACE` yield

The documentation for this class was generated from the following file:

- `geo/grace/data_wrapper.py`

## 5.17 `geo.pbo.DataWrapper` Class Reference

Class used to wrap `PBO` Data.

Inheritance diagram for `geo.pbo.DataWrapper`:

## Public Member Functions

- def `__init__` (self, obj\_wrap, geo\_poi, info\_dict)  
*Initialize `DataWrapper`.*
- def `info` (self)  
*Retrieve stored data metadata.*
- def `getIterator` (self)  
*Get an iterator to the data.*
- def `getIndices` (self)  
*Get the indices of the data.*

## Public Attributes

- `geo_point`
- `info_dict`

### 5.17.1 Constructor & Destructor Documentation

#### 5.17.1.1 `def geo.pbo.DataWrapper.__init__ ( self, obj_wrap, geo_poi, info_dict )`

## Parameters

<i>obj_wrap</i>	Data to be wrapped
<i>lp_stations</i>	list perturber containing station list
<i>geo_poi</i>	Geographic point of interenst

## 5.17.2 Member Function Documentation

5.17.2.1 `def geo.pbo.DataWrapper.getIndices ( self )`

## Returns

(station\_list, ('dN', 'dE', 'dU'))

5.17.2.2 `def geo.pbo.DataWrapper.getlterator ( self )`

## Returns

Iterator that will cycle over ('dN', 'dE', 'dU') for each station

5.17.2.3 `def geo.pbo.DataWrapper.info ( self )`

## Returns

Stored data metadata

The documentation for this class was generated from the following file:

- `geo/pbo/data_wrapper.py`

## 5.18 astro.kepler.DataWrapper Class Reference

Data wrapper for kepler light curve data.

Inheritance diagram for `astro.kepler.DataWrapper`:

## Public Member Functions

- def `getIterator` (self)  
*Retrieve an iterator to the data.*

### 5.18.1 Member Function Documentation

#### 5.18.1.1 `def astro.kepler.DataWrapper.getIterator ( self )`

##### Returns

Iterator to the [Kepler](#) Data (label, data, error)

The documentation for this class was generated from the following file:

- `astro/kepler/data_wrapper.py`

## 5.19 `framework.data_class.DataWrapperBase` Class Reference

Base class for wrapping data for use in DiscoveryPipeline.

Inheritance diagram for `framework.data_class.DataWrapperBase`:

## Public Member Functions

- def `__init__` (self, obj\_wrap, run\_id=-1)  
*Construct object from input data.*
- def `update` (self, obj)  
*Updated wrapped data.*
- def `get` (self)  
*Retrieve stored data.*
- def `getResults` (self)  
*Retrieve accumulated results, if any.*
- def `addResult` (self, rkey, rres)  
*Passes a result to the data wrapper to be stored.*
- def `reset` (self)  
*Reset data back to original state.*
- def `getIterator` (self)  
*Get an iterator to the data.*
- def `getIndices` (self)  
*Get indices of the data.*

## Public Attributes

- **data**
- **results**
- **constants**
- **run\_id**

### 5.19.1 Detailed Description

### 5.19.2 Constructor & Destructor Documentation

5.19.2.1 `def framework.data_class.DataWrapperBase.__init__( self, obj_wrap, run_id = -1 )`

#### Parameters

<i>obj_wrap</i>	Data to be wrapped
<i>run_id</i>	ID of the run

### 5.19.3 Member Function Documentation

5.19.3.1 `def framework.data_class.DataWrapperBase.get( self )`

#### Returns

Stored data

5.19.3.2 `def framework.data_class.DataWrapperBase.getResults( self )`

#### Returns

store results

The documentation for this class was generated from the following file:

- framework/data\_class.py

## 5.20 utilities.map\_util.Planet Class Reference

A class for storing variables about a planetary body.

### Public Member Functions

- `def __init__ (self, name)`
- `def get_lateraldist_array (self, ppd)`

### Public Attributes

- `a`
- `b`
- `e_sq`
- `equator_1deg`
- `avg_radius`

#### 5.20.1 Detailed Description

name: The name of the planetary body

The documentation for this class was generated from the following file:

- `utilities/map_util.py`
